

LAYOUT FOR THE OPERATIONAL FUEL BUNKERS LOCATION – LEVEL +7,5M

In case of the floor on the level of +7,5 using, so it is necessary to move some of the technology components (header, steam heater, piping and cabling) to the new layout on this floor because of its necessity to save it operation. This is the technology related to the boiler K7 operation. The space is quite large to can fine a free place for this technology.
